METHOD AND APPARATUS FOR PRODUCING
COMPRESSED COMPILER PRODUCTS

5   **ABSTRACT OF THE DISCLOSURE**

Improved techniques for reducing the size of compiler products are disclosed. The techniques facilitate reduction of size by providing differential schemes aimed at producing compiler related information in a compressed form. The compressed compiler related information include symbol names

10   associated with symbols encountered in programming languages. The improved techniques yield improved compilation times and compiler products that utilize substantially less storage space (e.g., disk storage space).
